**Notes**

- <sup>1</sup> 1. The numbers 12-8-28 for example are the N-P-K ratios of the fertilizer, that is the proportion of Nitrogen (N), Phosphorous (P) and Potassium (K) contained in a blended fertilizer.
- <sup>2</sup> 2. 12-8-28 is Multi-purpose fertilizer used in agriculture and horticulture that has been formulated to suit Cayman Islands' soil nutrient profiles that are consistently low in available Potassium (K)
3. The Department switched from 12-8-28 to 12-6-24 in the later half of 2008 to reduce cost in the face of skyrocketing fertilizer prices driven by historically high oil prices
4. In 2010 as part of efforts to further reduce costs the DoA split purchases between two suppliers, one of whom supplied a 12-8-24 product. This enabled the use of competitive market forces to negotiate lower prices from the two suppliers.
5. Ammonium Nitrate fertilizer is no longer available as current US port security and shipping regulations prohibit the export of this fertilizer due to its potential explosive properties. The small quantity sold in 2006 represented the inventory that was imported prior to the introduction of the current US regulations.
6. The Rescue Organic Fertilizers were introduced in 2008. In 2010 DoA ceased imports of these products in deference to a private sector company that took up the product line. Sales in 2010 represented sales of remaining inventory after importation ceased.
7. The introduction of protected agriculture (tropical shade houses) in 2009 and subsequent expansion in 2010 necessitated the importation and sale of a range of specialized fertilizers shown at the bottom of the table.

## 2. EDUCATION

**A note on the International Standard Classification of Education (ISCED)**

The world's education systems differ considerably, both with respect to their structures and to their curriculum contents. As a consequence, it is often difficult for national educational policy makers to compare their own education systems with those of other countries.

UNESCO has for a long time been concerned with the design of an International Standard Classification of Education that would facilitate comparisons of education statistics and indicators of different countries on the basis of uniform and internationally agreed definitions. The present version, known as ISCED97 was formally adopted in November 1997.

Guidelines to ISCED97 can be downloaded from the UNESCO Institute for Statistics website; [www.uis.unesco.org](http://www.uis.unesco.org). The table below is a template on how to classify educational programmes in the Cayman Islands by ISCED levels, which starts at the lowest level (0) for pre-primary.

<b>Educational programme</b>	<b>Educational Attainment</b>	<b>Enrolment</b>
Pre-primary	0	0
Primary Yr 1-5	0	1
Primary Yr 6	1	1
Middle Yr 7-8	1	2
Middle Yr 9	2	2
High School Yr 10-11	2	3
High School Yr 12	3	3
Vocational	4	4
Community College	4	4
College/University, short	5B	5B
University, first stage, long	5A	5A
University, post-graduate	6	6
Not Stated	9	9

Note: ISCED level 6 means "leading to an advanced research qualification", that is earned Doctorate (Ph. D.). Hence, "Masters" should be classified as 5A and not at level 6. ISCED level 5A contains educational programmes at university normally of the length of 3 – 5 years, sometimes longer. Hence, Bachelor, Masters and first professional (law, dentistry, medicine, veterinary) degree programs are all classified as 5A.

In addition to levels of education ISCED97 contains a classification of education programmes in the Fields of Education. Eurostat (the statistical office of the European Union) has published a more detailed manual on Fields of Education and Training.

**Notes:**

<sup>1</sup> In September of 2010 the structure of high schools was changed. Previous to this the students took external examinations at the end of Year 12. With the changes to the school system, students now take exams at the end of Year 11. Year 12 is used as an additional mandatory year allowing some students to resit exams where they weren't successful and/or take up some vocational classes. September 2010 was the transition year; therefore two year groups took external examinations in June 2010 – Year 11 students **and** Year 12 students. Students who were successful in their examinations can now go on to do A' Levels at one of the private schools or begin the Associate program at UCCI.

<sup>1</sup> Certificate Programme - all students are full time. During 2007 admission was unusually high due to lowering of the admission criteria.

<sup>2</sup> Professional Programme - all students are part time

<sup>3</sup> The Executive programme was introduced in 2008.

<sup>4</sup> Continuing education includes leisure courses with no matriculation requirements and do not lead to a degree, only for leisure or vocational purposes.

<sup>5</sup> Leisure courses which were part of the continuing programme were discontinued.

## 4. EMPLOYMENT

## A Note on the Labour Force Survey

The Labour Force Survey (LFS) is in most countries, the most important source for labour market information.

The labour force comprises persons 15 years and over residing in the country who are employed or actively seeking work during the reference period. In the Cayman Islands, the LFS is also used as the basis for population estimates. The LFS seeks information on respondents' labour market status and profile during a specific reference period, normally a period of one week, immediately prior to the start of the survey.

The first LFS in the Cayman Islands was conducted in 1991. The LFS is a random sample survey. This means that not every household are surveyed and those selected are done so purely by chance. However, since all households have an equal chance of selection, the more often the survey is conducted, the higher the chance of repeat selection. It must be stressed that, the 'sample selection' is generated by computer and is completely random.

Labour Force Surveys are carried out in many countries around the world. The International Labour Organization (ILO) has published recommendations concerning the definitions to be used in LFS. The LFS in the Cayman Islands uses internationally agreed concepts and definitions.

The LFS data reported to the Economics and Statistics Office (ESO) are treated in strict confidence and used for statistical purposes and published in aggregate form only.

It must be stressed that the results from the LFS are **estimates**. Results from sample surveys are always subject to some uncertainty because only a part of the total has been measured. This is called the sampling error. The uncertainty in the estimates can be calculated and the results are given as so called confidence intervals. For example the population in the Cayman Islands was estimated at 57,009 in the 2008 LFS, and the 95% confidence interval was calculated to be between 55,200 to 58,800.

In the LFS, population means the "resident population"; that is persons staying or intending to stay in the Cayman Islands for at least **six** months. Visitors/tourists who are here for less than 6 months are not included in the resident population. Also persons in institutions for more than 6 months and resident students abroad for more than 6 months are excluded.

Note:

Work permit numbers are derived administratively from the records of the Immigration Department. The completeness and quality validation of this administrative source remain the responsibility of the Immigration Department. Accordingly, the data collected and collated by the Immigration Department do not accord with the concepts and definitions adopted by the ESO for statistical purposes. As stated above the ESO uses resident population. However while the ESO excludes all persons residing on island for less than six months or intending to reside on island for less than six months these same persons if they are working are included in the work permit numbers. Despite the differences between the administrative data and the estimates derived from the labour force survey, the work permit numbers provide useful information on foreign labour activities outside of sample periods.

## 7. FOREIGN TRADE & BALANCE OF PAYMENTS

## Foreign Trade and Balance of Payments

The foreign trade statistics comprise imports of goods to and the exports of goods from the Cayman Islands. The trade statistics are compiled mainly from the computerized records maintained by the Customs Department. These records are derived from the documents submitted by all traders (importers, exporters and agents) who are required to record the statistical codes (which are based on the Cayman Islands Tariff Code (CITC)), and the value and quantity of the goods imported or exported. In keeping with international standards, exports are recorded at 'free on board' (f.o.b) while imports are recorded at cost, insurance and freight (c.i.f).

The Economics and Statistics Office (ESO) reviews and edits the data obtained from the Customs Department. These are then supplemented or verified by other trade data from the United States Bureau of Census, and the statistical offices of the United Kingdom and Jamaica. The data is then converted into the United Nations Standard of International Trade Classification (SITC revision 3). Hence, the main task for ESO is to compile and check the credibility of the data, and more importantly, classify them into tables that can be useful for analysis.

The foreign trade statistics tables in this chapter cover only merchandise (visible) trade. Trade in services (tourism, financial services, etc) is not covered here. However, the expansion of the foreign trade statistics to include trade in services statistics is one of the medium term objectives of the ESO.

The balance of payments (BOP) is a system of accounts that measure the economic transactions of a country's residents against the residents of the rest of the world. Along with the System of National Accounts, this is used universally in evaluating the economic performance of countries and jurisdictions using accepted international standards issued by the International Monetary Fund.

In 2007, the Economics and Statistics office (ESO) as part of its strategic plan to expand its economic statistics, undertook a project to develop the BOP in stages. The first stage was the compilation of the current account. The current account records transactions covering inflows and outflows of goods and services, investment income and current transfers. The sum of the balances from these types of transactions determines whether the Cayman Islands current account is in surplus or deficit. A current account deficit indicates the extent to which Cayman Islands is drawing on the resources of the world for current consumption and investment; while a surplus will show the extent to which Cayman Islands is providing resources to the rest of the world in terms of capital and financial flows.

**Notes:**

Exports for 1994-2000 are estimated. Export figures for 2003-2008 are based on new data from US, Jamaica and UK and include domestic exports and re-exports.

The export figures were compiled from imports data from the US Census Bureau, the UK Trade information website and the Jamaica Statistics Office.

The high imports figure in 2005 is due to reconstruction after Hurricane Ivan in 2004.

## 11. POPULATION AND VITAL STATISTICS

2010 Everyone Counts!

## Population and Vital Statistics

This section contains a number of tables that are based on Census data. The Population and Housing Census is conducted every ten years and during which time data is collected on all persons and housing units in the country. From this wealth of data, information is produced on variables such as population density, fertility, and marital status. Information can also be generated by geographic areas, such as districts and urban/rural areas.

The population census is a count of all persons who normally resides in a country, i.e. their 'usual place of resident'. A person is considered a usual resident if he/she lives in the country or have been living or intends to live in the country from at least 6 months or more. This count of usual residents excludes visitors from abroad and residents who have been residing overseas for a long period, usually more than 6 months. Residents temporarily away are included in the census count. The last population census in the Cayman Islands was taken in October 2010. The results from the 2010 Census will be published by the end of 2011.

During the intercensal years, population estimates by age, sex and status (Caymanians/ Non Caymanians) are prepared to reflect changes in the population.

Population estimates are calculated based on the usual resident population and are prepared bi- annually (mid-year and end year) to give an indication of population changes. From year to year, the estimates are adjusted for births, deaths and net migration. In the absence of reliable net migration figures, population estimates may be produced from other data sources such as sample survey e.g. a Labour Force Survey (LFS). It should be noted that results from sample surveys are subject to sampling error because only a part of the total population is been measured then weighted to find the total. Population estimates can also be derived by conducting head counts between censuses or by developing a population registry.

In the LFS, the term population means the "resident population", that is persons staying or intending to stay in the Cayman Islands for at least six months.

65+	645	758	1,163	1,601	2,264
Dependency ratio	75.6	85.5	56.4	40.9	33.8

The dependency ratio is the number of persons under the age of 15 and over the age of 64 divided by the number of persons in the age group 15-64 years inclusive, in percent. The dependency ratio can be interpreted as the ratio of persons that are not normally economically active to the population of working/productive ages.

**Notes:**

\* End of year estimate includes Grand Cayman (post Hurricane Ivan) and Cayman Brac estimate. The drop in population level is related to the temporary relocation of residents abroad in the aftermath of hurricane Ivan.

\*\* The sharp increase in population is related to the return of residents who left after Ivan, and the increase in the labour force needed for the reconstruction of the country.

During 2002 to 2004 a large number of persons were granted Caymanian Status.

## 12. PRICES AND NATIONAL INCOME

## Prices and National Income

### Consumer Price Index

The Consumer Price Index (CPI) is an index that simplifies the measurement of movements of consumer prices relative to a reference period. The index for the CPI reference or base period is set to 100 and changes in prices are measured in relation to this figure.

ESO has recently updated the CPI base period in connection with the adoption of a new CPI basket. The new base period is June 2008; the new CPI basket (also known as the 2008 CPI basket) comprises 1,393 items that are classified into 12 divisions. The divisions are based on the United Nations Classification of Individual Consumption According to Purpose. The 2008 CPI Basket replaces the 1994 CPI basket which has been in use officially up to June 2009; it comprised of 661 items categorized into 8 divisions. More information on the 2008 CPI basket are found in the reports "The Cayman Island's 2008 Consumer Price Index Basket" and "The Cayman Islands' CPI Report for September 2009 and December 2009" available on the ESO website, [www.eso.ky](http://www.eso.ky).

### System of National Accounts

The System of National Accounts (SNA) is a comprehensive and systematic record of the value of all economic activities in a country. The SNA is widely used across countries in the world and is the standard tool for comparing economic performance across countries and across sectors within a country.

An important indicator of economic activity generated from SNA is the Gross Domestic Product (GDP). GDP is the total sum of all the productive activity of businesses, government and non-profit organizations taking place within the domestic economy during a given period e.g. quarterly or annually. It is thus a direct measurement of the size of the economy.

*The GDP tables include Financial Intermediation Services Indirectly Measured (FISIM).*

Financial intermediary institutions intermediate between lenders and borrowers by routing funds between them. These institutions such as banks and others incur liabilities on their own account by taking deposits, issuing bills, bonds or other securities. They in turn make loans and advances, purchase bills, bonds and other securities from other institutional units, such as, corporations, households and government on varying terms and conditions. The difference between the higher rates charged to borrowers and the lower rates paid to lenders is an implicit charge to customers for the service provided by these financial intermediaries and is referred to as financial intermediation services indirectly measured (FISIM) and forms part of the output. If gross output of banks were calculated in a similar way to other industries, their operating surplus would be negative.

Ideally, FISIM should be allocated to the different users but because of lack of detailed data the alternate approach of creating a notional industry with no output and the FISIM treated as intermediate consumption resulting in negative value added is the used.

More information on the SNA can be found in the brochure "Cayman Islands' System of National Accounts" and in the Cayman Islands' System of National Accounts Report 2008 -2009 which is available on the ESO website, [www.eso.ky](http://www.eso.ky).

## 16. UTILITIES

## Utilities

### Electricity

The Cayman Islands remains heavily reliant on imported oil for its energy demands, getting approximately 99 percent of its energy from this source.

Private companies own and operate the two electricity plants. Both Caribbean Utilities Co. Ltd. (CUC) in Grand Cayman and Cayman Brac Power & Light Co. Ltd use primarily diesel generating units.

Approximately 99 percent of the households in the Cayman Islands use electricity as the main type of lighting (please see Table 16.02.a). A significant proportion (94%) of the households use type of lighting (please see Table 16.02.a). A significant proportion (94%) of the households use electricity from public service providers and about 5 percent use electricity from private generators. Electricity from renewable energy sources seemed almost non-existent according to the 2007 Survey of Living Conditions (SLC).

Home Gas Ltd is the sole LPG<sup>1</sup> or propane provider. Propane is mainly used for cooking (please see Table 16.02.b).

### Water

For water the traditional sources of supply have been private wells and/or catchment in cisterns, but these have been supplanted by piped water supply for most households. but these have been supplanted by piped water supply for most households.

As shown in Table 16.04, approximately 84 percent of the households had mains (city water or desalinated) as their main source of water supply. Cisterns, rain or water trucks was the main water source for 7.2 percent of the households, while 7.6 percent of households used "wells" as their main source of water.

According to the 2007 National Assessment of Living Conditions (NALC) Study, the frequency of water supply does not appear to be a problem in the Cayman Islands except for Cayman Brac/Little Cayman.<sup>2</sup>

### Sewerage

As of 2007, the disposal of sewerage appears not to be a problem in the Cayman Islands as 72 percent of the households had a septic tank or cesspool. while 13.1 percent of the households had mains as their type of sewerage system (please see Table 16.08).
