OVERSEAS TRADE STATISTICS 1996

INTRODUCTION

1. In all but a few countries trade statistics are compiled from computerized records maintained by Customs Departments. They are based on documents which are completed by importers, exporters or their agents, who are obliged to record the appropriate statistical code number against each commodity. National trade classifications are generally based upon the system recommended by the Customs Cooperation Council and which directly links to the United Nations Standard International Trade Classification (SITC) used in all statistical publications.

2. The routine tasks of the statistical organization are then confined to checking the credibility of the data and making adjustments for special cases etc. A computerized Customs system is currently being used in the Cayman Islands. However, only a small number of the importers do their own coding.

3. The volume of imports has grown to such an extent that it would take considerably longer than a year for the staff concerned to fully process one year's documents. The last year to be fully coded was 1981 (published in 1985) and for the years from 1985 onwards only a sample of documents have been coded using a simplified commodity coding system (see below). Full details of the commodities and quantities imported into the Cayman Islands are unlikely to be available until such time as the administrative system at Customs has been computerized. For the years 1982 to 1984 estimates of total value of imports only are available.

Simplified System of Import Statistics for 1985 Onwards

4. The key objective was the production of an estimate of total trade with as much detail as was compatible with available resources. From 1985, the total value of imports was determined for each port from Customs cash books. All high value documents (over \$25,000 or so) and a sample of low value customs documents were coded and scaled up to the control total for each port. Furthermore, for large regular importers (where the invoices attached to the warrants are extremely detailed), a series of standard percentages for commodities were established and used instead of fully coding each warrant.

5. One further simplification was to reduce the number of commodity headings in the Cayman Islands' classification from 400 to about 110. This was achieved by combining the lower value headings into wider groupings. Around 50 of the most important headings were retained. The present headings, like those

which they replaced, are defined in terms of the Standard International Trade Classification, and from 1991 the headings were amended slightly to match the new "Revision 3". These SITC codes enable the figures for the Cayman Islands to be compared with those for other countries at the two digit Division level.

6. The advantages of the simplified system have been somewhat eroded since 1985 by the increasing number of documents, the need to change the data processing system and the loss of skilled staff, needed to provide information for market research. For 1989 and 1991, therefore, reductions in the processing burden, including halving the sample of low-value consignments, have been made. Sampling naturally reduces the precision of the estimates but this loss has been limited by the reduction in the number of commodity headings now being used.

Conversion to the Harmonized System of Classification

7. In 1991 the Cayman Islands adopted a version of the Harmonized System of Classification which is the basis for reporting in this Overseas Trade Report. This system of classification gives more detail than in previous years. While there is no direct concordance for some items an attempt has been made to compare imports with previous years where possible.

Export Statistics

8. Before January 1986 exports were not well documented by the Customs Department. From the beginning of 1986, however, documents for goods for export (or re-export; for repair for instance) have been required. As the value of exports from the Cayman Islands is very low it has been assumed that exports for each of the years 1982-1984 were around \$1.0 million and a little higher for 1985. The statistics for 1986 and after were compiled from the export entries lodged with the Customs Department. However, many of these export entries have no stated value, and estimates have had to be made by Statistics Office staff.

Coverage

9. **Included** in import and export statistics in this publication are: goods sent abroad and returned for repair; goods re-exported as incorrect or faulty since they cannot be easily identified at the time of import; and the personal effects of migrants and their cars. The two latter categories are separately identified within export statistics but not within import statistics.

10. **Excluded** are: goods in transit or other trans-shipments not destined for the Cayman market (e.g. Lobster tails trans-shipped to Florida); and parcel post exports for which no records are kept.

11. The values recorded for import statistics are CIF (Cost, Insurance and Freight) - they are based on the values declared by importers and accepted by Customs, including freight and insurance charges, but they do not include import duties or other local costs. Exports are valued FOB (Free on Board) - that is, the cost of delivery to the docks excluding onward freight and insurance costs.

12. The values recorded for imports and exports over a particular period represent the documents brought to account by Customs during that period, and they will therefore include some goods actually arriving towards the end of the previous period.

Abbreviations, rounding and symbols

13. In tables where figures have been rounded to the nearest final digit there may be an apparent slight discrepancy between the sum of the constituent items and the total as shown.

CIF - Value including insurance and freight charges

FOB - Value excluding insurance and freight charges

SITC - Standard International Trade Classification
(Revision 3 is used in this publication)

HS - Cayman Islands Simplified Harmonized System of
Classification.

CI Code - Cayman Islands Tariff Code (prior to 1991)

RE-EXPORTS - Goods imported and subsequently exported
without undergoing any processing, repackaging or other value added
activities

.. - not available

- - nil or negligible
(less than half the final digit shown)

NES or nes - not elsewhere specified

COMMENTARY ON 1996

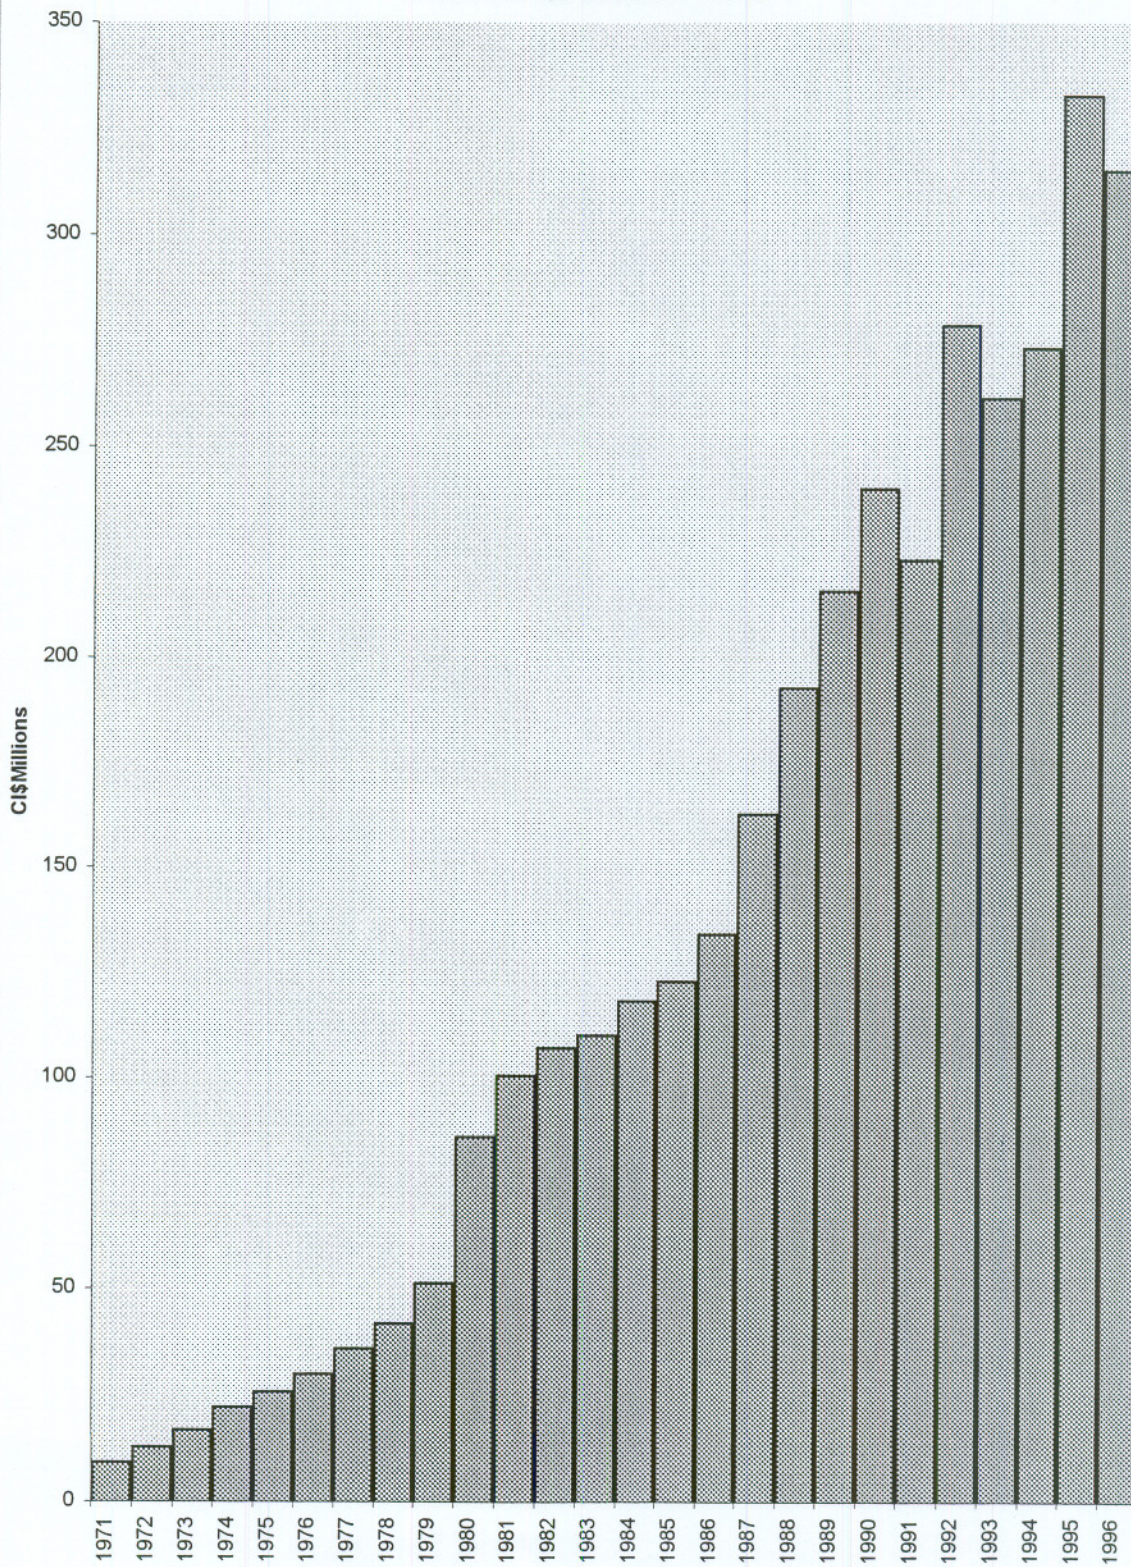

14. The total value of goods imported in 1996 amounted to CI\$314.9 million. This represents a 5.3 percent decline from the previous year of 1995. (Table 1).

Imports, with fuel deducted, amounted to CI\$281.7 million in 1996 and also showed a 6.8 percent decrease over the same period. The volume of fuel imports grew 6.3 percent to 32.3 million imperial gallons in 1996. This was largely due to an increase in imports of diesel oil and aviation fuel. The value of fuel imports increased by 9.5 percent in 1996 to CI\$33.1 million, reflecting a rise in international oil prices in 1996.

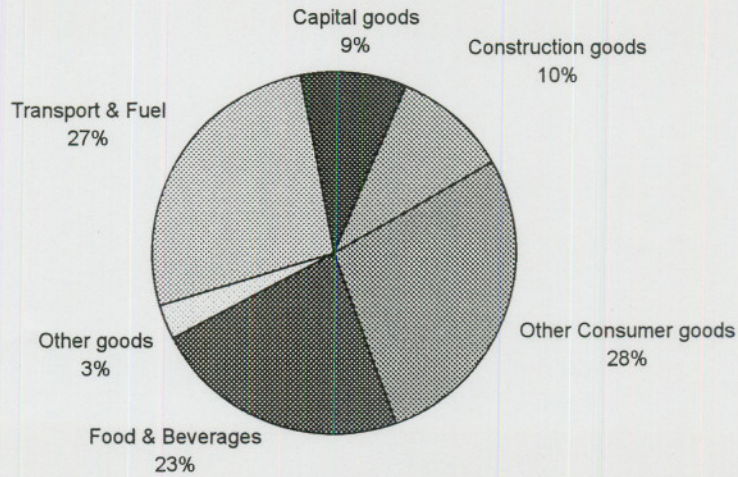

15. Imports in 1996 decreased in all quarters, though the second quarter only declined by CI\$1.0 million. (Table 2)
16. Exports in 1996 amounted to CI\$2.2 million - a very small figure compared to imports of CI\$314.9 million. (Table 1) The visible trade deficit was therefore CI\$312.7 million, a decrease 5.0 percent compared to 1995. This trade deficit was largely covered by earnings from invisible exports from the Financial and Tourism sectors.
17. The analysis of imports by broad economic categories (Table 3 & Chart 2) shows that changes between 1995 and 1996 varied considerably. Consumer goods remained the predominant category with a share of almost 50 percent of imports, and this category declined by 4.8 percent. Several other groups showed increases: transport and fuel, which accounts for approximately one quarter of total imports, increased by 19.1 percent to CI\$84.3 million; construction goods, which accounted for 10 percent of imports, remained relatively unchanged at CI\$32.4 million; and food and beverages, which account for 23 percent of imports, grew by 21.3 percent to CI\$71.1 million. Capital goods which accounted for 9.0 percent of imports, and includes machinery, transport and plant equipment, declined by 37.1 percent to CI\$29.7 million.
18. Import figures by country of origin are somewhat distorted due to the complexities of the transshipment-through-USA trading methods. Table 6 shows that the share of imports from the USA was 76.7 percent. However, this figure may be overstated due to the lack of country identification marks on some large mixed consignments imported from wholesalers in the USA.
19. The Netherlands Antilles is the predominant source of refined oil imports. It accounted for 10.6 percent of total imports in 1996, and was the second largest source of imports. Japan was third, with 2.2 percent and the United Kingdom fourth, with 1.8 percent.

1995	332.5	21.8	3.4	-329.1
1996	314.9	-5.3	2.2	-312.7

NOTES

Export figures prior to 1982 exclude migrants' cars and personal effects. These items are included for all years for imports.

The negative balances are exaggerated because imports include insurance and freight whereas exports do not.

Figures for year 1976-79 and 1982-84 are estimates. See text.

This figure excludes the cost of the leasing rights purchased by Cayman Airways for two Boeing 727 aircraft.

NOTES

- The CI code for prepared cooking oils was changed from 138 to 089 in 1988. In 1991 cooking oils and margarine are included in SITC 09.
- Includes division 34 (Gas, Natural & Manufactured) for 1989.
- The CI code for PVC pipes and fittings was changed from 378 to 165 in 1988.
- Formica and other laminates were incorrectly coded to CI code 181 in 1987.
- The CI code for linoleum type textile floor coverings was changed from 189 to 209 in 1988.
- The CI code for non-crystal glassware was changed from 210 to 221 in 1988.
- Includes a \$2.7m de-salination plant.
- The CI code for satellite dishes was changed from 294 to 301 in 1988.
- CI code for clocks was changed from 366 to 372 in 1988.

NOTES

1. The coverage of the SITC sections is illustrated by the commodity detail given in table 4.
2. The channelling of imports for the Cayman Islands through Florida tends to result in overstatement of imports from the USA and understatement of imports from other countries.
3. Most of the oil imported from Curacao originates from Venezuela, though some comes from elsewhere (eg. Trinidad and Tobago or U.S. Virgin Islands).
4. Includes power generating machinery partly constructed in the U.K..
