## NOTES ON THE INDEX COMPILATION

## 1. Data collection

This report uses the 2016 CPI basket based on the results of the 2015 Household Budget Survey (HBS) as updated between August 2016 and August 2017. The goods and services in the basket are classified into twelve (12) divisions using the United Nations' Classification of Individual Consumption According to Purpose (COICOP). In all, there are $\mathbf{2 , 2 2 7}$ items (7th-digit COICOP level) included in the basket collected from 203 providers/outlets in Grand Cayman, compared to 2008 when there were $\mathbf{1 , 6 4 7}$ items collected from 147 providers/outlets. The items are classified as follows:

All price indices for goods and services purchased abroad were taken from price indices published by the US Bureau of Labour Statistics.

ESO collection periods and price averaging methodologies follow updated international standards, in particular, the Consumer Price Index Manual: Theory and Practice (August 2004) published by the International Labour Organization (ILO). Prices of selected items are collected every second month of the quarter. Vulnerable items which change monthly, such as vegetables and fruits, fish and meat, and gas are collected on a monthly basis. Prices across outlets are averaged using the geometric mean formula to reduce the impact of extreme or outlier prices (please see below).

## 2. CPI formula

The CPI is computed using Lowe's formula. The Lowe indices is one of the widest and most popular class of price indices which is obtained by defining the index as the percentage change between the periods

CONSUMER PRICE REPORT APRIL TO JUNE 2023
compared, in the total cost of purchasing a given set of quantities, generally described as a "basket". ${ }^{1}$ The Lowe index, PLo , is defined as follows ${ }^{2:}$

$$
\mathrm{P}_{\mathrm{Lo}=}=\sum_{i=1}^{n} p_{i}^{t} q_{i}^{\prime} \sum p_{i}^{0} q_{i}
$$

Where $\mathrm{n}=$ number of products in the basket with prices $\mathrm{p}_{\mathrm{i}}$ and quantities $\mathrm{q}_{\mathrm{i}}$
$0=$ base period
$\mathrm{t}=$ later period being compared

## Geometric mean

The price $\mathrm{p}=[\mathrm{p} 1, \mathrm{p} 2, \ldots, \mathrm{pn}]$ for each item from different outlets is the average of prices of the outlets using the geometric mean or the formula:
$\mathrm{p}=\left(\prod_{i=1}^{n} p_{i}\right)^{1 / \mathrm{n}}=\sqrt[n]{\mathrm{p}_{1}, \mathrm{p}_{2}, \ldots, \mathrm{p}_{\mathrm{n}}}$

Inflation: this refers to the percentage change in the Consumer Price Index from one period to another. Typically, this period would be a year or a quarter.

Annual Inflation Rate: the percentage change of the CPI in the quarter under review over the CPI of the same quarter a year ago. This is also known as the year-on-year inflation rate.

Quarterly Inflation Rate: the percentage change of the CPI in the quarter under review over the previous quarter. This is also known as the quarter-on-quarter inflation rate.
